

## **PRESS RELEASE**

### **Würth Industrie Service presents the future of supply at LogiMAT 2024!**

*Bad Mergentheim/Main-Tauber region.* Pure innovation: Various companies will introduce their latest products at the LogiMAT 2024 in Stuttgart from 19th to 21st March 2024. LogiMAT sets new standards as the biggest annual intralogistics trade fair in Europe. Innovative products, solutions and systems for procurement, storage, production and distribution logistics will take the centre stage this year under the motto "Shaping change together". Würth Industrie Service GmbH & Co. KG will present the holistic solutions for supply of production and operating materials at its booth H31 in hall 1. The highlight of the trade fair will be the future of supply and how industrial customers can have one system for all parts – for A-, B-, and C-Parts – thanks to CPS®miSELF.

The digital supply systems of Würth Industrie Service for direct and indirect materials provide the basis for manufacturing, materials management and maintenance as well as for the assembly workstation of the future – and this with maximum security of supply, lean and productive processes in the supply chain, precisely coordinated working environments and intelligent processes between humans and systems. At the joint trade fair booth of Würth Industrie Service and Adolf Würth GmbH & Co. KG, the focus will be on these solutions for informing, experiencing and trying out: from RFID Kanban for fully automated replenishment of small parts for production, ORSY®mat storage and vending machines for auxiliary and operating materials, modular storage management CPS®ORSY, to innovative workplace design CPS®IWS and electronic ordering systems. Interested visitors will also receive an overview of technical expertise, application consulting, design support and the latest innovations for holistic C-Parts management.

#### **Highlight of the trade fair - CPS®miSELF The future of supply – one system for all parts.**

There are often hundreds, even thousands of parts in manufacturing companies that need to be available at the right time, in the right quantity and at the right place. How about a solution that centrally manages the material and information flows of all parts? A concept that provides an overview of article stocks, goods movements, order status, storage locations and suppliers through the integration of partner suppliers and automatically triggers repeat orders on top. CPS@miSELF, the solution to digital supply management, Würth Industrie Service is paving the way towards the future of supply. Whether for processes in procurement or even intralogistics: Thanks to the combination of tried and tested systems, secure processes and digital management, CPS@miSELF enables not only the management of C-Parts from the product range of Würth Industrie Service, but also hassle-free management of non-Würth products as well as A- and B-Parts. And this with a single system for all the parts across all the suppliers and storage locations. The system provides a real-time overview of the items in the inventory, movement of goods, suppliers and warehouse locations, detailed consumption analyses and forecasts as well as automated tracking of requirements covering all product groups and thus ensures comprehensive supply security and provides a variety of options for increasing productivity. This holds true not only for production and procurement, but also for intralogistics, materials management as well as maintenance. The basis for CPS@miSELF is a web-based platform in combination with intelligent RFID-Kanban solutions and related hardware like bins, labels and racks of Würth Industrie Service. Thus, the C-Parts Management partner offers a solution that enables the users to digitalise their entire supply chain and make it more transparent. This results in coordinated, connected and most importantly simple and lean processes. Because of the transparency across goods handling, the management of, for example, internal milk runs, workplace supply and complete asset management of components in production process can also be taken care of in the future. Thus, Würth Industrie Service is taking material supply to a new level. A level that achieves maximum efficiency and transparency throughout the procurement process.

### **The perfect interaction of intelligent systems**

How about a rack, which can be accessed in real time via an information board? A rack that signals the exact location of the required item in combination with a display? And all of this is centrally accessible on a monitor? Würth Industrie Service shows how this can be achieved with its newly developed iTERMINAL for complete digitalisation of the Kanban rack. In combination with the extended functions of the iDISPLAY, which acts as a digital shelf label and displays all information relating to items, fill quantity, availability, storage location and upcoming replenishments directly at the point of use, picking and search processes can be optimized to the maximum.

**Würth Industrie Service GmbH & Co. KG will be present at the LogiMAT from 19th to 21st March 2024 in Stuttgart in hall 1 at booth H31.**

Brief profile of Würth Industrie Service GmbH & Co. KG

Within the Würth Group, Würth Industrie Service GmbH & Co. KG is responsible for supplying to the industrial sector. Since its foundation in the year 1999, the company is located at Würth Industrial Park in Bad Mergentheim, Germany with over 1,800 employees.

As a one-stop C-Parts provider, the company offers its customers a specialised product range with over 1,400,000 items: from screws and tools to connection and fastening technology, technical chemicals as well as occupational safety solutions. Aside from the extensive standard product range, the strength of the company lies in its customer-specific, logistical and dispositive supply and service concepts as well as special parts. Under the service brand "CPS® - C-Product Service", the company offers modular solutions customised as per the customer's requirements. These consumption-based and demand-based systems streamline the processes for purchase, logistics and quality assurance while enabling the procurement of small parts in a cost-optimised manner. Logistic and dispositive services such as shelving systems that use scanners or a just-in-time supply using Kanban bin systems play a significant role in increasing productivity.
